

Campbell Hausfeld Launches Next Generation of Air Tools - Advanced tools for tough tasks

Campbell Hausfeld, the leading manufacturer of air compressors and air tools, introduces the AT Power Series, a line of Advanced Tools for Tough Tasks. Backed by Campbell Hausfeld's built to last guarantee, the AT Power Series provides a rugged, engineered composite housing and easy-to-use features typically available on costly models. The first four AT Power Series tools consist of a Cut-Off Tool, Half-Inch Impact Wrench, Die Grinder and Air Hammer.

AT Power Series Development

Campbell Hausfeld engineers created the AT Power Series tools after talking with air tool users and learning that ease of use was a priority. Each AT Power Series tool is designed to meet that need, with better balance and innovative triggers that prevent pinched fingers. Switches are in logical locations, so users don't have to stop and make adjustments.

Campbell Hausfeld engineers also found their users wanted air tools that would withstand the pressures of tough working environments. Therefore, Campbell designed an industry-exclusive engineered composite housing that is durable enough to survive multiple drops on concrete or the accidental run-in with an automobile's wheels while remaining extremely lightweight, resulting in less user fatigue. In addition to being durable and lightweight, the housing is ergonomically-designed for comfort and stays near room temperature so the tools aren't too cold to hold during continuous use.

"For many of our users, time wasted is money wasted," said Jeff McGrady, marketing manager of tools and accessories at Campbell Hausfeld. "We've developed AT Power Series tools that have a comfortable fit and are easy to operate. Even the most demanding tasks, like removing a rusted bolt, are completed in reduced time, allowing users to get on with the more enjoyable things in life."

The AT Power Series Product Offering

The first four AT Power Series models include:

- **Half-Inch Impact Wrench (TL1102):**

This balanced, ergonomically-shaped wrench comes with a patented single hammer impact mechanism that provides 20 percent more torque than the leading competitor. The TL1102's direction and variable speed controls are combined into one switch that is within thumb's reach on the back of the tool. Additionally, the angled exhaust diffuser keeps debris from blowing into the user's face. A newly designed trigger makes pinched fingers less likely. The suggested retail price is \$34.99.

- **Cut-Off Tool (TL1135):**

This cut-off tool is more efficient than any cut-off tool on the market. It features a safety shield with an adjustable swivel that allows the user to easily reach tough angles and includes a sight line mark to set up straighter cuts. The TL1135 also features a diffuser making it quiet enough for indoor use. The suggested retail price is \$34.99.

- **Die Grinder (TL1120):**

The TL1120's ergonomic body allows users to easily hold the tool in various positions. Also, the TL1120 has a diffuser that minimizes noise. The suggested retail price is \$22.49.

- **Air Hammer (TL1103):**

Designed with a palm-fitting rounded back end for easier control, the TL1103 features a larger, two-finger trigger that eliminates pinched fingers. The suggested retail price is \$17.49.
