

New Vertical Twin-Tank Compressor Has Contractors Seeing Double

Campbell Hausfeld introduces the industry's first oil-free air compressor to utilize a vertical-shaft gas engine. In addition to ease of maintenance, its two-gallon twin tanks are mounted on a sturdy vertical cart to create a "small footprint" for convenient maneuverability.

"We have reduced the burden of time-consuming compressor maintenance and transport," explained Brad Miller, Product Manager for Campbell Hausfeld Compressors. "The vertical twin-tank compressor increases job-site efficiency through oil-less compressor operation and its compact design ensures easy portability from work site to work site."

Powered by a 5.5 horsepower Briggs and Stratton engine, the vertical twin-tank compressor also features an easy-to-use control panel and hose wrap. Its Built To Last workmanship is backed by Campbell Hausfeld's limited warranty and has a suggested retail price of \$599.00.

The vertical twin-tank compressor is currently available at Tractor Supply Company, Inc. and will be featured at other retailers nationwide later this year. Customers can obtain purchasing information by calling 1-888-CHPOWER (1-888-247-6937) or by visiting www.chpower.com on the Web.

Founded in 1836 and headquartered in Harrison, Ohio, Campbell Hausfeld is a leading manufacturer and marketer of air compressors, air tools and accessories, paint sprayers, welders and pressure washers.
